

Guide-in systems, for a perfect landing every time

Pro-Park Guide-in System

For boats 18' or longer, Pro-Park has the ultimate "can't miss" double-entrance guide-in system. It starts to guide your craft 32" prior to the boat entering the lift and again as you enter the lift. They are designed to be used in combination with another pair of single or double guide-ins at the front of the lift. For smaller, easy to handle boats, you may opt for two pair of single Pro-Park guide-ins.

- Guides boat by its rub rail so it never mars or touches the hull
- Maintenance-free PVC guide tubes covered by SDP fabric
- Aluminum attachment framework with infinite width adjustment
- Sold in pairs of either single or double guide-ins

Motor Stop

- Stops your boat in the same location every time
- Keeps your boat from floating through the lift
- Aluminum framework with vinyl bumper stops lower unit 27" away from lift cradle

Precision-Park Guide-in System

- Full-length carpeted horizontal guides with vertical entry bumpers for initial contact
- Two additional vertical bumpers for final contact with boat's rub rail for perfect alignment
- Adjusts vertically and horizontally for a perfect fit
- Available for all V and VSD lifts except the VSD-7500 and the VSD-10000

FLOE maintenance free bunk systems provide optimum support

Full-length bunk system

- Maximum boat hull support and stability
- Strong aluminum extrusion contours to boat hull for complete support

- Bunks can be offset towards dock for easy access in and out of your boat
- Infinite vertical and horizontal adjustment to accommodate most boat hulls
- Sold in pairs

Cradle Pad Pivot Bunks

- Supports and stabilizes hull
- Infinite vertical and horizontal adjustment
- Sold in pairs; two pair recommended

Pontoon Full-Length Bunk / Guide-in System

- A bunk and guide system all in one
- Extended bunks begin guiding your pontoon 16" before entering the lift
- Aluminum frame with maintenance-free composite guide
- Enables you to use your boat lift in shallower water because the bunks lift your boat by the frame instead of the pontoons
- Adjustable vertically and horizontally
- Sold in pairs

Advanced Hull System

- System incorporates six 30" cradles to support the boat's hull
- Cradles have a strong aluminum extrusion covered by a durable grey vinyl for maximum protection
- Four cradle pads are non-adjustable and form a keel pad for the bow and the stern of the boat
- Two of the cradle pads are adjustable and are designed to support the outside chine of the boat hull
- Infinite horizontal adjustment
- For inboard and v-drive boats there is a four-cradle version available
