

Hydraulic Cantilever Lift

The perfect low-water lift offering effortless operation

Imagine pressing a button on a key-fob remote control as you walk to your dock and having your boat in the water and ready to go when you arrive. That's the convenience and sophistication you get with a Hewitt Hydraulic Cantilever Lift. Based on our standard cantilever design, these lifts can rest dock side in as little as 24" of water, perfect for use with shorter docks. Available in 3900 lb and 5200 lb capacity models.

Hydraulic Pump Chest & Remote Control

The key-fob remote control and a locking, water-resistant pump chest are standard. The chest neatly houses the hydraulic pump, 12' control cord and 12V battery (not included). A solar cell battery charger and space-saving pump chest stand are also available as options.

Features

- 115V AC, 220V AC, 12V DC and 24V models. Operating time: 120 seconds up, 170 seconds down.
- Sealed twin hydraulic cylinders with double chrome-plated shafts, waterproof synthetic hose and biodegradable hydraulic fluid. Cylinders are raised out of the water in the lift's up position.
- Double-reinforced uprights – hydraulic cylinders pivot on a large torsion pin (not a bolt).
- Corrosion-resistant all-aluminum frame includes four 3' adjustable-height leveling legs with stainless steel quick-release pins.
- Two full-length adjustable bunks and keel protector.
- Exceptional 15-year warranty on aluminum and welds.
- Four pontoon conversion kit options available.

See pages 36-47 for complete information on options, accessories and canopies.

Optional Cylinder Sleeve
