

The best buy in a dock today!

Because its built to last...

D-500 Docks are designed for easy installation, durability and economy. The frameworks are constructed of welded steel that is hot-dip galvanized after fabrication for maximum strength and durability. The cedar decking is naturally rot-resistant and requires no painting or staining. It will weather naturally to a soft, beautiful grey.

...and installs easier than any other!

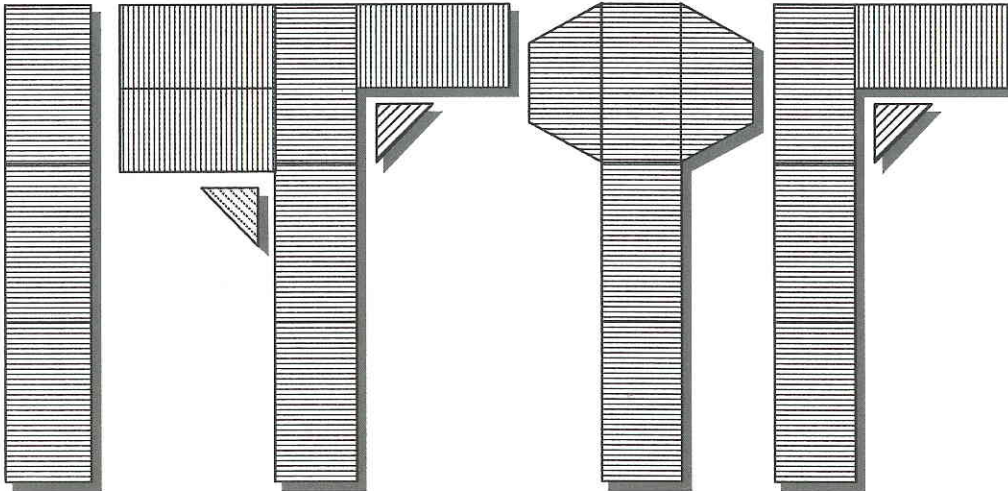

You can forget about your waders, hammer and jack. Just set the legs, place the frames top to top, then flip into the water. D-500 sections are supported during rotation and lock securely together without bolts or pins. Just drop in the removeable decking to complete the installation. Fall removal is just as simple. This is the dock you've been looking for!

Wide variety of layouts possible

Straight "T"- with or without miter corners
