

# Sectional Docks

Economical modular post and plank system

Hewitt Sectional Dock Systems offer greater economy, quick setup and minimal maintenance. Frames and decking are preassembled in easy-to-handle modules. The aluminum sides wrap around the decking to maintain a crisp, clean appearance. Section ends may be dressed off with optional aluminum end caps. Hewitt Sectional Docks offer many layout possibilities and give you the choice of three different decking options.

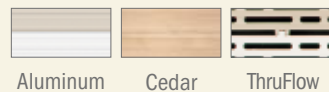

## Built to Last

Frames, poles and brackets are all made from rustproof, corrosion-resistant aluminum – never needs painting. Extruded aluminum side rails assure high strength and stability for a lifetime of service. Decking is fitted into a continuous channel on both sides and mechanically fastened for better support and rigidity.

## Size and Layout Flexibility

Dock sections are 8' and 10' long and come in both 4' and 6' widths. Sections may be joined end-to-end or turned at right angles to form “L”s, “T”s, and platforms. A wide variety of accessories are also available to further customize your dock.

## Decking Options

Aluminum Cedar ThruFlow
